The Nynomic Cloud

Measuring devices without connection to a cloud and the associated possibilities for smart processes are almost no longer available. Our customers have high demands on the availability and security of data in the cloud. The Nynomic cloud provides the perfect base for smart Industry 4.0 applications with high availability that meets all the necessary security requirements for most markets. Possible application areas are:

- Updates and maintenance of devices remotely
- Management and evaluation of all data
- Preventive self-learning maintenance models based on the data of a large device pool
- Real-time data available from anywhere
- Web server, mobile phone app's and other applications can be developed individually by m-u-t
